## MRI LUMBO-SACRAL SPINE

Multiplanar MRI of lumbo-sacral spine has been performed. The study reveals,

### FINDINGS:

Anterior displacement of L5 vertebra over S1

Compromised posterior height of the L5 vertebral body

Loss of lumbar lordosis

Spondylolysis at L5

Desiccated L4-L5, L5-S1 intervertebral discs

Pseudo bulge at L5-S1 level mildly compressing thecal sac abutting the traversing nerve roots with bilateral lateral recess intervertebral foraminal narrowing

Alignment, heights and bone marrow signal intensity of rest of the lumbar vertebral bodies are within normal limits.

Curvature of spine is well maintained.

Signal configuration of conus and cauda are within normal limits.

Configuration of rest of the discs, thecal sac, filar roots, lateral recesses, neural foraminae, neural arches, facet joints and posterior elements are within normal limits.

No intra / extraspinal masses seen.

Dimensions of rest of the spinal canal are within normal limits.

### IMPRESSION:

**Grade II anterior listhesis of the L5 vertebra over the SS1 vertebra.**
